

Mdimagh Momtez

Networks Engineer · Cloud DevOps · Infrastructure as Code · Kubernetes & Distributed Systems

✉ montez.mdimagh@gmail.com  linkedin.com/in/montez-mdimagh  github.com/MontezMdimagh

Available February 2027 for a 6-month end-of-studies internship (PFE) · open to relocate

Education

National Institute of Applied Science and Technology (INSAT) 2022 – 2027 (Expected)
Engineering Degree – Networks & Telecommunications (Minor: Cloud Computing)

Baccalaureate in Mathematics, With Highest Honors 2020 – 2021

Certifications

🌟 **AWS Certified Solutions Architect – Associate**  🌟 **AWS Certified Machine Learning Engineer – Associate** 
🌟 **AWS Certified Cloud Practitioner**  🌟 **Machine Learning Specialization – DeepLearning.AI**

Professional Experience

Talan May 2026 – Jul 2026
Cloud DevOps & AI Engineering Intern

- Designed and built **Aegis**, a Kubernetes security gate: a deterministic policy-as-code engine (OPA/Conftest, kube-linter, kubeconform) enforcing 10 CIS/PSS-mapped checks from a versioned `policy.yaml`, gating every build in Jenkins/GitLab CI instead of expert manual review.
- Built a bounded, RAG-grounded AI remediation agent (Azure OpenAI, function calling) proposing JSON-Patch fixes for violations, each verified by automatic re-scan and dry-run before opening a GitLab merge request for human review.
- Validated it with an eval harness over a labeled 30-manifest corpus (~92% precision, ~88% recall, ~85% fix-success), hardened it against prompt injection, and indexed every audit into Elasticsearch with Grafana dashboards.

MedSirat Jul 2025 – Aug 2025
DevOps Intern

- Designed and implemented a full CI/CD pipeline (Jenkins, Docker) automating build, test, and deployment of a containerized Spring Boot service across dev, staging, and production Linux environments, making releases repeatable and faster.

Sigma Lending Sep 2025 – Nov 2025
AI Engineering Intern *Remote*

- Automated a manual, document-heavy process end to end: a Python OCR + LLM pipeline that extracted and classified loan documents over REST APIs and cloud storage, feeding structured data into downstream decision workflows.

Fliggs Mobile Jun 2025 – Dec 2025
Backend Developer (Part-time) *Remote*

- Built and shipped GraphQL and REST API endpoints (TypeScript, Node.js/NestJS, Prisma, PostgreSQL) for core features of a live consumer mobile app; profiled slow database queries and API response times.

Projects

Autonomous AIOps Platform for AWS Cloud Monitoring & Incident Detection

- Built an anomaly-detection and automated-alerting pipeline over simulated AWS CloudWatch metrics using Isolation Forest and LSTM forecasting, triggering SNS/Lambda alerts on detected incidents.
- Containerized it with Docker, provisioned the AWS infrastructure (EC2, S3, CloudWatch, Lambda, SNS) as code with Terraform, and instrumented it with Prometheus/Grafana.

Intelligent Credit Platform: Business-Process Automation for Loan Intake

- Modelled loan-application intake as an n8n orchestration (OCR extraction, LLM verification of extracted fields against applicant-declared data, automated scoring), replacing a sequence of manual checks and exposing results via a REST API.

Skills

- **Cloud (AWS):** EC2, S3, Lambda, CloudWatch, IAM, SNS
- **IaC, Containers & K8s Security:** Terraform, Docker, Kubernetes, OPA/Conftest, kube-linter, kubeconform, CIS/PSS
- **CI/CD & Version Control:** Jenkins, GitLab CI, Git/GitHub/GitLab merge-request workflows, automated testing in CI
- **Observability:** Prometheus, Grafana, CloudWatch, Elasticsearch
- **Languages:** Python, TypeScript/JavaScript, SQL, Java
- **AI & Automation:** Azure OpenAI (RAG, function calling), eval harnesses, OCR, n8n, Scikit-learn, TensorFlow/PyTorch

Languages & Achievements

English (Professional) French (Professional) Arabic (Native) German (A2)

- CyberSphere CTF: 2nd Place (SecuriNets INSAT)
- Seneca Hacks: Top 10 Finalist
- Junior Enterprise INSAT, Project Cell Member
- IEEE INSAT Member
